SCHEMA DI COLLEGAMENTO

DOSATORE BRILLANTANTE "DOSATRON"

CARATTERISTICHE TECNICHE

FUNZIONAMENTO: utilizza la pressione di risciacquo della macchina.

COLLEGAMENTO IDRICO: utilizzare la cannucchia installata nella macchina per collegare il dosatore lato "freccia uscita" all'impianto di risciacquo della lavastoviglie nel tratto compreso fra l'elettrovalvola e il boiler. Con la cannucchia in dotazione collegare il dosatore lato "freccia entrata" al contenitore di brillantante.

FISSAGGIO MECCANICO: utilizzare il dado in dotazione. N.B. il dosatore puo' avere qualsiasi orientamento di montaggio.

INNESCO: procedere nel seguente modo: svitare la vite di regolazione fino all'arresto, quindi spingerla all'interno piu' volte affinche' il brillantante aspirato riempi entrambe le cannuce.

REGOLAZIONE: ad ogni risciacquo inietta una quantita' di brillantante regolabile da 0 a 4 cm³, equivalente ad una lunghezza aspirata della cannucchia da 0 a 30 cm. La portata nulla si ha avvitando completamente la vite di regolazione (senso orario), mentre la portata massima si ottiene con la vite svitata di circa 13 giri (senso antiorario). Per ogni giro della vite la dose varia di 2cm aspirati in cannucchia (0.3 cm³/giro).
